DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Stacy Taylor on 14 December 2006.

The application has been amended as follows:

In the specification, line 9 of page 9 through line 8 of page 11, and line 3 of page 41 through line 7 of page 43 have been deleted for clarity, since they refer to figures not included with the present application.

Allowable Subject Matter

2. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fails to anticipate or make obvious the structure of claims 58, 61, 62, 74, 77, and 78, including, *inter-alia*, an analyte sensor sensing primary and secondary composite signals, with the application of signal adjustment coefficients to the secondary composite signal in order to compensate for detector failure, drift,

environmental variations between secondary sensors, and environmental similarities between primary and secondary detectors. Gerber (US Patent Application Publication 2002/0161286) in view of Miller (US Patent 4748562) discloses an analyte sensor with primary and secondary composite sensors that are responsive to confounding phenomena, but does not disclose applying compensatory coefficients to the secondary composite signal.

The prior art of record fails to anticipate or make obvious the structure of claims 59, 65, 67, 69, 75, and 81, including, *inter-alia*, an analyte sensor where weighting factors are applied to determine a primary composite signal. Gerber in view of Miller discloses an analyte sensor sensing a primary composite signal, but does not disclose applying weighting factors to determine the signal.

The prior art of record fails to anticipate or make obvious the structure of claims 60, 66, 68, 70, 73, 76, and 82, including, *inter-alia*, an analyte sensor where signal adjustment of primary composite signals is performed using temporal factors. Gerber in view of Miller discloses an analyte sensor that senses primary composite signals, but does not disclose adjusting the signals using temporal factors.

The prior art of record fails to anticipate or make obvious the structure of claims 63, 64, 71, 72, 79, 80, including, *inter-alia*, an analyte sensor that senses primary composite signals and measures perfusion as a confounding factor in the measured analyte concentration. Gerber in view of Miller discloses measuring primary composite signals with an analyte sensor, but does not disclose measuring perfusion as a confounding factor affecting the analyte concentration.

Response to Arguments

3. Applicant's arguments, see remarks filed 25 October 2006, with respect to claims 1-57 have been fully considered and are persuasive. The rejection and objection of claims 1-57 have been withdrawn.
